

To Whom It May Concern:

On behalf of the St. Lucie County School District in Fort Pierce, Florida, we would like to let you know the importance of the ITFS (Instructional Television Fixed Services) spectrum to our educational training and instruction.

ITFS distance learning technology is providing professional training and classroom instruction to over 30,000 students in St. Lucie County. Through our ITFS licenses<sup>1</sup>, we have been able to provide more efficient delivery of curriculum and various other educational opportunities for students, parents, teachers and community members.

As an integral part of the educational delivery system, we now plan to expand our usage to include video on demand, learning capabilities for homebound and special needs students, and parenting information to residents of rural areas of our community.

We highly recommend that you retain the current eligibility requirements for ITFS licenses and hope that you will not jeopardize the years of work, expenditures of money, and educational planning that have taken place in our school district. We hope you will support us on our ongoing educational mission by maintaining the integrity of the educational uses of our spectrum.
